Siemens to unveil all-new traffic control system at Traffex 2017

Siemens, a global leader in traffic management technology, will unveil Plus⁺, a new generation of traffic controller and signals at Traffex 2017 at the NEC next month. The new solution includes newly designed and dedicated on-street equipment and fully integrated design, configuration and installation tools, ensuring the most efficient traffic signal implementation available today. The solution will be showcased on the Siemens stand, C10.

According to Keith Manston, Head of Product Management, the Plus⁺ system uses advanced technology to distribute intelligence and control around the intersection, rather than it all being centrally located in the controller cabinet. "Much reduced cabling for data and power is at the heart of the new system which is serially linked and fully supported by a complete range of dedicated components", he says.

"The aim of the Plus⁺ solution is to offer significant reductions in on-street installation and maintenance time, improved safety and yielding significant reductions in total deployment costs compared to conventional methods", he adds.

"But it's not all about the technology. Plus+ will be safer and quicker to install, easier to maintain and less expensive", states Manston. Thanks to the use of significantly fewer and lighter cables and with the new approach making it possible to pre-assemble signals and use low-level access poles, installation engineers will spend less time working on-street reducing risk and public disruption. You can find out more on the <u>Plus+</u> webpage.

Siemens ITS is a leading international provider of products, systems and solutions that enable people and goods to be transported in an efficient, safe and environmentally friendly manner. Business activities include rolling stock, rail automation, intelligent traffic and transportation systems, and rail electrification. Mobility's service offerings maximise vehicle and infrastructure availability. The Division's comprehensive portfolio is further augmented by turnkey project expertise and tailored financing solutions.

About Siemens

Siemens AG (Berlin and Munich) is a global technology powerhouse that has stood for engineering excellence, innovation, quality, reliability and internationality for more than 165 years. The company is active in more than 200 countries, focusing on the areas of electrification, automation and digitalization. One of the world's largest producers of energy-efficient, resourcesaving technologies, Siemens is a leading supplier of efficient power generation and power transmission solutions and a pioneer in infrastructure solutions as well as automation, drive and software solutions for industry. The company is also a leading provider of medical imaging equipment – such as computed tomography and magnetic resonance imaging systems – and a leader in laboratory diagnostics as well as clinical IT. In fiscal 2016, which ended on September 30, 2016, Siemens generated revenue of \notin 79.6 billion and net income of \notin 5.6 billion. At the end of September 2016, the company had around 351,000 employees worldwide. Further information is available on the Internet at <u>www.siemens.com</u>.
