### Siemens introduces latest cloud-based traffic management solution

Siemens, a global leader in traffic management technology, has released the latest hosted application module for Stratos, the company's cloud-based strategic traffic management solution.

According to David Pregon, Senior Product Manager (Systems), the latest release of the Stratos Traffic Signals module adds support for the Stratos Remote Monitoring with direct secured IP connectivity to the Stratos Outstation or ST950 controller. "Combined with support for existing UTC/SCOOT and RMS systems, the Traffic Signals module brings an all-new, easy to use, unified user experience allowing you to view all your systems together. This new product combination provides a smooth migration path from legacy dial up RMS fault monitoring to next generation secured IP fault monitoring in a single user interface," he said

Installation is now easier with plug and play connectivity with built-in security features for communications between instation and outstation and user certification options for on-street access to outstation web pages, enabling enhanced audit logs of any changes made by users.

New Stratos Outstation firmware and configuration data may be downloaded from the Stratos system reducing the need for costly site visits.

Live demonstrations of all available Stratos application modules will be presented by Siemens at Traffex 2017 in April at the NEC, Birmingham on stand C10 alongside a real-time service operations centre showcasing the company's approach to integrated solutions for a sustainable, safe, clean, connected and efficient transport system.

At Traffex 2017, Siemens will also be unveiling a number of exciting new developments, in particular Plus<sup>+</sup>, a new generation of traffic controller and signals and Sicore II, an all-new class leading ANPR camera.

Siemens ITS is a leading international provider of products, systems and solutions that enable people and goods to be transported in an efficient, safe and environmentally friendly manner. Business activities include rolling stock, rail automation, intelligent traffic and transportation systems, and rail electrification. Mobility's service offerings maximise vehicle and infrastructure availability. The Division's comprehensive portfolio is further augmented by turnkey project expertise and tailored financing solutions.

Siemens was established in the United Kingdom more than 170 years ago and now employs 15,000 people in the UK. As the world's largest engineering company, Siemens provides innovative solutions to help tackle the world's major challenges. Siemens has offices and factories throughout the UK, with its headquarters in Frimley, Surrey

#### About Siemens

Siemens AG (Berlin and Munich) is a global technology powerhouse that has stood for engineering excellence, innovation, quality, reliability and internationality for more than 165 years. The company is active in more than 200 countries, focusing on the areas of electrification, automation and digitalization. One of the world's largest producers of energy-efficient, resource-saving technologies, Siemens is a leading supplier of efficient power generation and power transmission solutions and a pioneer in infrastructure solutions as well as automation, drive and software solutions for industry. The company is also a leading provider of medical imaging equipment – such as computed tomography and magnetic resonance imaging systems – and a leader in laboratory diagnostics as well as clinical IT. In fiscal 2016, which ended on September 30, 2016, Siemens generated revenue of €79.6 billion and net income of €5.6 billion. At the end of September 2016, the company had around 351,000 employees worldwide. Further information is available on the Internet at [www.siemens.com](http://www.siemens.com).
