

Siemens secures place on new traffic technology procurement framework

Siemens ITS, a global leader in traffic management technology, has successfully secured a place on the new Traffic Management Technology (TMT2) framework agreement developed by the Crown Commercial Service to provide public sector customers with access to industry leading, innovative traffic management solutions.

“The announcement follows a comprehensive and competitive tendering process and is welcome news for the company”, said Matthew Vincent, Sales and Marketing Director. “Being part of TMT2 provides our customers with an additional and straight-forward procurement route to our Intelligent Traffic Systems portfolio, including traffic control, management, enforcement and electric vehicle charging equipment.”

The new framework will deliver local, regional and national traffic management technologies through a qualified supply chain ensuring reliability and resilience. TMT2 aims to provide value for the nation through outstanding commercial capability and quality customer service and helps reduce the cost of traditional procurement across government.

TMT2 replaces the Traffic Management Technology framework, which expired on 10 July 2016 and allows direct and standardised procurement of small components through to large complex solutions. The framework has been developed in consultation with major public sector stakeholders such as Transport for London and Highways England, along with representatives from local authorities and traffic management industry trade bodies.

Siemens was established in the United Kingdom more than 170 years ago and now employs 14,500 people in the UK. As the world’s largest engineering company, Siemens provides innovative solutions to help tackle the world’s major challenges. Siemens has offices and factories throughout the UK, with its headquarters in Frimley, Surrey.

Notes to editors:

Siemens AG (Berlin and Munich) is a global technology powerhouse that has stood for engineering excellence, innovation, quality, reliability and internationality for more than 165 years. The company is active in more than 200 countries, focusing on the areas of electrification, automation and digitalization. One of the world's largest producers of energy-efficient, resource-saving technologies, Siemens is No. 1 in offshore wind turbine construction, a leading supplier of gas and steam turbines for power generation, a major provider of power transmission solutions and a pioneer in infrastructure solutions as well as automation, drive and software solutions for industry. The company is also a leading provider of medical imaging equipment – such as computed tomography and magnetic resonance imaging systems – and a leader in laboratory diagnostics as well as clinical IT. In fiscal 2015, which ended on September 30, 2015, Siemens generated revenue of €75.6 billion and net income of €7.4 billion. At the end of September 2015, the company had around 348,000 employees worldwide. Further information is available on the Internet at www.siemens.com.
